Instruction manual for setting up and testing

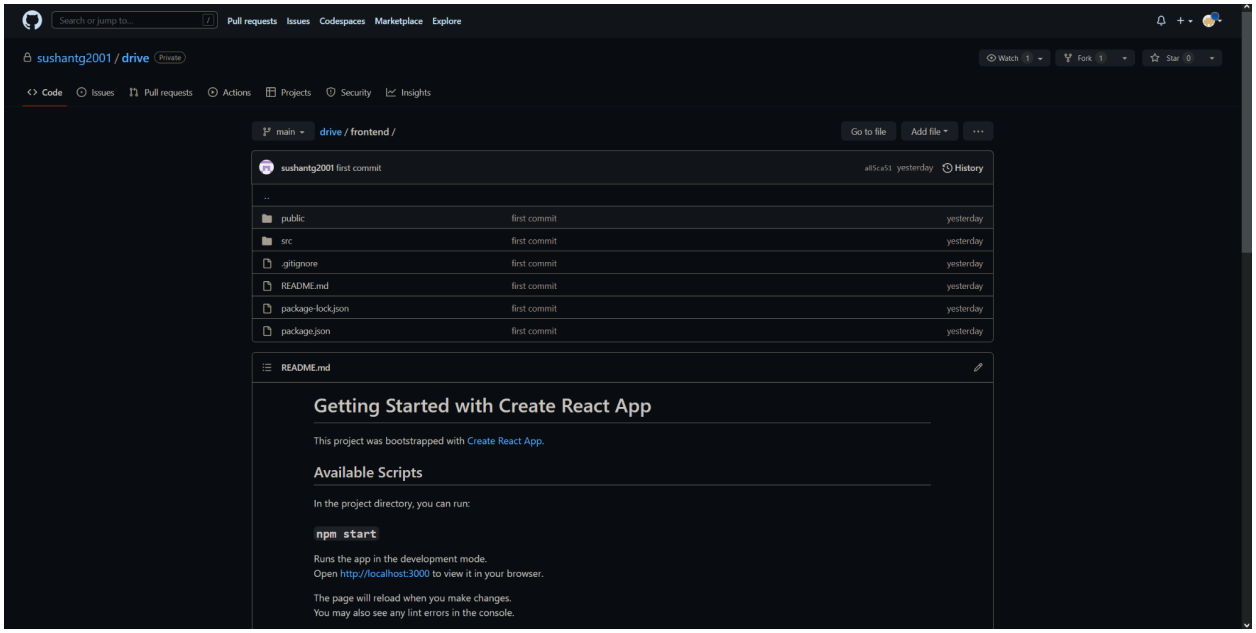
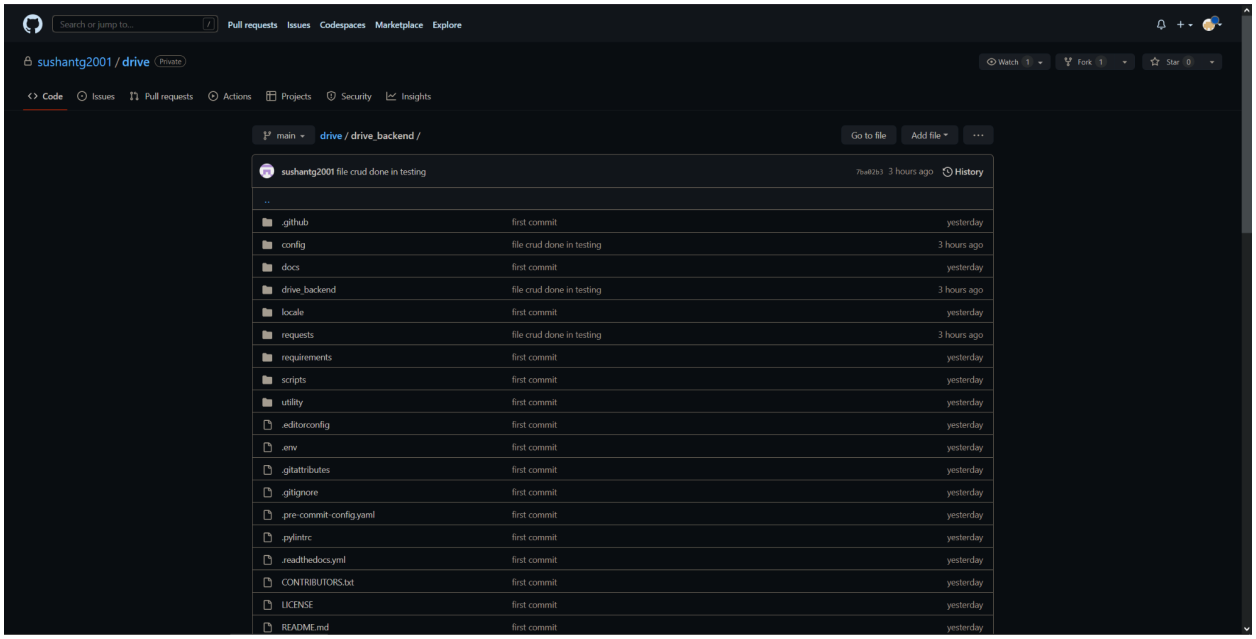
Frontend server
The frontend UI for the google drive clone is built using react js.



1. Install dependencies using “npm install”.
2. Run server using command “npm start” to start app in the development mode.
3. Open http://localhost:3000 to view it in your browser.

File server

The file server backend is built using django and rest api framework. This file server uses



1. Clone the repository from https://github.com/sushantg2001/drive

```
$ git clone https://github.com/sushantg2001/drive
```

2. Create a virtual environment using python

```
$ python3 -m venv venv
$ source venv/bin/activate
```

3. Install project requirements

```
$ pip install -r requirements.txt
```

4. Create new postgresql database with name ‘drive_backend’
5. Make app migrations

```
$ python manage.py migrate
```

6. Start the django server

```
$ python manage.py runserver
```
